8 SCOOPS OF THE MILKYWAY

In the side arm of the spiral galaxy Milky Way, we share a small home with a fascinating neighborhood of 8 wondrous Planets and a powerful Sun. Planets so different from each other, they can hardly be called one family, Yaavvet they create a perfect harmony.

We've used this harmony to create the show.

From the Burning Sun, Lava filled surface of Venus to the huge stormy belts of Jupiter or the unimaginably beautiful eclipse of Saturn,

Feel the uniqueness and beauty of our Solar system in "8 Scoops of Milky way"

BIZARRE MOONS

Moon is the most prominent & special companion in Earth's night sky. Our solar system now embodies 178 named moons around 8 planets. Even with the sparse amount, the Planets often overshadowed the moons in terms of size. As our Technology advanced these minor members of solar system displayed amazing aspects & facets beyond our wildest imagination. The Moons now outshine their stolid Parents in character. Join us for a tour of some of the most Frigid, Violent & absolutely Strange Worlds.

PURSUING THE DWARFS

Dwarf planets are the worlds too small to be considered as full-fledged planets, but large enough to be classified as Asteroids.

They were born the same way as our Eight Planets, but somehow along the way, they stopped developing further.

These Embryonic Planets holds the key to the secrets of Planetary Evolution. Lets take a glimpse of the wee class of Dwarf Planets in our Full Dome Show 'Pursuing the Dwarfs'.
